Distribution Box Floor Plan Dimensions

Overview

Distribution Box and Selection Guide: Internal Structure, Components. Learn how to choose a distribution box and understand its internal structure, inclu.

Key Takeaways

Distribution box floor plan dimensions vary by type, typically ranging from compact underfloor boxes of 95x60 mm to larger multi-way enclosures, with height and width depending on the number of rows and sockets. Standard Floor Box Dimensions

- ABB Underfloor Trunking System: Single compartment trunkings measure 95 x 60 mm, which can be converted into double compartments using separators. These boxes are suitable for raised floors and can also be mounted on walls with vertical bends for integration with above-floor trunking systems (ABB SACE) .
- Legrand Area Distribution Boxes: Designed for technical flooring or false ceilings, these boxes accommodate 1 to 12 RJ45 sockets and are available in Cat. 5e and Cat. 6 configurations. The dimensions are selected based on network size and flexibility requirements, ensuring short wiring lengths for optimal performance .
- TOP Series Distribution Boxes: Includes models such as TOP-TS, TOP-TF, TOP-LS, TOP-PS, TOP-PF, and TOP-S, ranging from 1-way to 36-way configurations. Dimensions include length, width, and height, which vary according to the number of ways and mounting requirements .

Design Considerations

- Number of Rows and Ways: The floor plan must account for the number of rows (or ways) in the distribution box, as this directly affects the overall dimensions and spacing requirements .

- **Integration with Trunking Systems:** Boxes can be connected to underfloor or above-floor trunking systems using junction boxes, ensuring seamless cable management and adaptability for office layouts .
- **Accessibility and Maintenance:** Floor boxes should allow easy access for adding or reconfiguring sockets, especially in modular office environments where flexibility is critical .

Summary

When planning a floor distribution box layout, consider the type of box, number of ways, compartment size, and compatibility with raised floors or false ceilings. Typical dimensions for underfloor boxes start at 95 x 60 mm, while larger multi-way enclosures vary according to the number of rows and sockets, ensuring both functional and ergonomic integration into the building's electrical infrastructure .
