

Double-layer electrical distribution box size and specifications table

Overview

Electrical DB Box Size Guide 2026 This report provides a comprehensive analysis of electrical distribution board (DB) box sizes, Distribution box catalogue.

Key Takeaways

A typical double-layer electrical distribution box ranges from approximately 600–800 mm in height, 400–600 mm in width, and 150–300 mm in depth, depending on residential or commercial specifications.

A double-layer electrical distribution box (also called a double-tier or two-level DB) is designed to house multiple circuit breakers or fuses in two stacked rows, allowing for organized distribution of electricity across several circuits . These boxes are commonly used in residential, commercial, and light industrial settings.

Typical Dimensions

- Height: 600–800 mm
- Width: 400–600 mm

- **Depth:** 150–300 mm These dimensions can vary depending on manufacturer, intended amperage, and whether the box is wall-mounted or freestanding . The internal usable space is slightly smaller than the external dimensions due to wall thickness, door returns, and mounting hardware .

Design Considerations

- **Internal Layout:** Double-layer boxes typically have two rows of breakers, with bus bars connecting the main supply to each tier.
- **Capacity:** Residential double-layer boxes often accommodate 12–24 circuits, while commercial or industrial versions can hold more, depending on amperage and breaker size .
- **Material and Protection:** Boxes are usually made of metal or high-grade plastic and may have IP ratings (IP44–IP67) for dust and water resistance .
- **Future Expansion:** Many double-layer boxes are designed with extra slots or space to allow for additional circuits or upgrades, such as EV chargers or smart home systems .

Summary

When selecting a double-layer electrical distribution box, consider external dimensions, internal usable space, number of circuits, amperage rating, and environmental protection. Typical sizes for residential and light commercial applications fall within 600–800 mm height, 400–600 mm width, and 150–300 mm depth, but always verify manufacturer specifications and local electrical codes before installation .
