

RIVO MULTITRADE OPTICAL SYSTEMS

Eci fiber optic communication

Overview

ECI is now Our optical networks solutions are open, interoperable, and efficient, enabling service providers to build fully disaggregated optical ECI Telec.

Key Takeaways

ECI Telecom, now part of Ribbon Communications, provides advanced fiber optic and packet-optical transport solutions for high-capacity, secure, and flexible networks. Overview of ECI Telecom

ECI Telecom Ltd, originally founded as the Electronics Corporation of Israel in 1961, specializes in telecommunications equipment, including packet optical transport products, SDN/NFV applications, and cybersecurity solutions. The company serves a wide range of clients, including cable operators, wireless service providers, utilities, data centers, and government entities . In 2020, ECI was acquired by Ribbon Communications, combining their expertise to offer a comprehensive portfolio of optical networking and communication solutions .

Fiber Optic Solutions

ECI's fiber optic communication solutions focus on high-capacity, scalable, and flexible optical networks. Their platforms support:

- Packet-optical transport for metro, regional, and long-haul networks
- 5G backhaul and mid-haul connectivity, enabling dynamic and deterministic performance for mobile networks

- Data Center Interconnect (DCI) for ultra-low latency and high-throughput connections
- Submarine cable systems, demonstrated by Ribbon's Apollo 9408 and 9608 platforms achieving up to 20Tbps per fiber pair on the JUNO trans-Pacific cable. These solutions are designed to be open, interoperable, and cost-effective, allowing service providers to deploy fully disaggregated optical networks with automated service provisioning and network optimization.

Key Technologies

- Transponders and optical line systems: Support flexible modulation from 400Gbps to 1.2Tbps per wavelength, optimizing performance for varying fiber conditions
- SDN/NFV integration: Enables software-defined network control and virtualization for agile service deployment
- Elastic MPLS and IP transport: Provides deterministic performance for critical applications and 5G services
- Network monitoring and analytics: Ensures optimal performance and efficient utilization of fiber infrastructure

Applications

ECI's fiber optic solutions are widely used for:

- Carrier networks: High-capacity metro and long-haul transport
- 5G networks: Backhaul and mid-haul connectivity for mobile operators
- Data centers: High-speed interconnects and low-latency links
- Submarine communications: Ultra-high-capacity transoceanic links
- Enterprise and government networks: Secure, reliable, and scalable optical infrastructure

Conclusion

ECI Telecom, now integrated into Ribbon Communications, provides state-of-the-art fiber optic communication solutions that enable service providers and enterprises to deploy high-capacity, flexible, and secure optical networks. Their technologies support modern demands such as 5G, cloud-to-edge connectivity, and submarine cable systems, making them a key player in global optical networking infrastructure.
