

Fiber Optic patch cord lc-st single-mode

Overview

LC to LC duplex single mode patch cables use UPC polish for low insertion loss and are designed for high-density environments.

Key Takeaways

A single-mode LC-ST fiber optic patch cord is designed for long-distance, high-performance optical connections, typically using 9/125 μm OS1 or OS2 fiber with low attenuation and reliable LC and ST connectors.

- Fiber Type: Single-mode 9/125 μm (OS1 or OS2), optimized for long-distance transmission with low signal loss .
- Connectors: LC connector on one end and ST connector on the other, often with ceramic ferrules for precise alignment and minimal insertion loss .
- Distance Capability: Supports long-distance links, typically up to 5 km at 1310 nm and up to 30 km at 1550 nm, depending on the fiber grade and network conditions .
- Jacket and Durability: Commonly features OFNR (riser-rated) or LSZH jackets for indoor use, with some models offering crush-resistant or plenum-rated options for enhanced protection .
- Performance: Low attenuation (e.g., 0.25 dB/km at 1550 nm, 0.35 dB/km at 1310 nm), supporting high-speed networks including 1G, 10G, and higher .

Applications

- Network Infrastructure: Ideal for connecting patch panels, switches, optical transceivers, and telco equipment in LAN, SAN, or GPON/FTTX networks .

- Indoor and Outdoor Use: Suitable for both indoor cabling and controlled outdoor environments, depending on jacket type and environmental ratings .

- High-Demand Data Transmission: Supports stable video, data, and voice transmission in data centers, educational institutions, and commercial networks .

Additional Features

- Durability: Many LC-ST single-mode patch cords include flexible boots, duplex clips, and reinforced jackets to prevent damage during installation and use .

- Standards Compliance: Typically meets ITU-T G.652A/B and IEC 60793-2-50 Type B1.1 standards, ensuring compatibility and reliable optical performance .

- Custom Options: Available in various lengths, connector combinations, and polish types (UPC, APC) to suit specific network requirements . In summary, an LC-ST single-mode fiber optic patch cord is a reliable solution for long-distance, high-speed optical connections, offering low attenuation, durable construction, and compatibility with a wide range of network equipment. It is particularly suitable for data centers, telecom networks, and enterprise LAN setups where stable and efficient fiber connectivity is critical.
