How much does a core 10 Gigabit switch cost

Overview

10 Gbps Switches | Newegg.comShop 10 Gbps Switches on Newegg.com. Watch for amazing deals and get great pricing. Amazon.com: 10 Gigabit SwitchFind 10G swit.

Key Takeaways

10 Gigabit core switches typically range from \$300 for small desktop models to \$5,000 or more for enterprise-grade switches.Consumer and Small Business Options

Entry-level 10G switches suitable for small offices or home labs generally cost \$300–\$800. For example, an 8-port 10GBase-T unmanaged switch can be found on Amazon for around \$350–\$400 and supports high-speed NAS, PCs, and routers . Some models combine a few 10G ports with standard Gigabit ports to reduce cost, such as the TRENDnet 28-port switch with 4 true 10G ports and 24 Gigabit ports .

Enterprise-Grade Core Switches

High-performance 10G core switches designed for data centers or large networks are significantly more expensive. Brands like Cisco, Netgear, and Juniper offer switches with 16–48 10G ports, advanced features, and robust build quality. Prices for these switches typically start around \$2,000–\$3,000 and can exceed \$5,000 depending on port count, redundancy, and warranty options . For example, a Netgear 16-port 10G switch with premium features and lifetime warranty is considered a high-end option .

Factors Affecting Price

- Port count: More 10G ports increase cost significantly.

- Managed vs unmanaged: Managed switches with VLAN, QoS, and monitoring features are more expensive.
 - Brand and support: Enterprise brands like Cisco or Juniper include support and firmware updates, which add to the price.
 - Form factor: Rack-mounted switches are generally pricier than desktop models.
- Summary

For a small office or home lab, expect to pay \$300-\$800 for a basic 10G switch. For a core network in a medium to large enterprise, prices typically range from \$2,000 to \$5,000+, depending on features and port density . Choosing the right switch depends on your network size, required throughput, and budget.
