How to clean black skin off pigtail fibers

Overview

Quick methods for stripping pigtail fibers How to Splice Fiber Optic Pigtails: A Step-by-Step Guide Master the art of fiber termination. Learn how to splic.

Key Takeaways

Use a combination of dry cleaning tools and compatible solvents with lint-free wipes to safely remove black residue from fiber optic pigtail fibers. Step 1: Inspect the Fiber

Before cleaning, inspect the fiber tip with a fiberscope to identify the extent of contamination. Ensure that all lasers are turned off to avoid exposure to invisible laser radiation during inspection .

Step 2: Dry Cleaning

For light surface contamination, use cartridge or pocket-style fiber cleaners:

- Cartridge cleaners: Press the thumb lever to expose a new cleaning area, then lightly hold the fiber tip against it and rotate the fiber 90 degrees for single, non-APC connectors .
- Pocket cleaners: Peel back the protective film to expose the cleaning surface and follow the same procedure .

Step 3: Solvent Cleaning for Gel or Stubborn Residue

If the black residue is from petroleum-based gel or heavy contamination:

- Use approved cleaning agents such as Fiber-Clean™, d'Gel, or HydraSol in limited quantities .
- Apply the solvent to a lint-free towelette, not directly to the fiber.
- Wipe the fiber gently, using the minimum number of strokes necessary to remove the residue.
- Remove excess gel with a dry lint-free cloth before applying the solvent to reduce exposure .

Step 4: Drying and Final Inspection

After cleaning, dry the fiber thoroughly with a lint-free cloth to prevent solvent wicking or swelling of the acrylate coating . Reinspect the fiber tip to ensure all black residue is removed and the fiber surface is clean.

Step 5: Handling Precautions

- Avoid soaking the fiber in solvents, as prolonged exposure can cause coating delamination and weaken the fiber .
- Always handle the bare fiber with care to prevent scratches or breakage.
- Use proper tools such as fiber strippers, cleavers, and isopropyl alcohol wipes for preparation and cleaning . By following these steps, you can safely remove black residue from pigtail fibers while maintaining the integrity and performance of the optical fiber.
