

Huawei Core Switch User Level

Overview

User levels determine operation rights of users. A larger value indicates a higher level. By default, the level of a user logging in through the console port is 15, and the level of a Telnet/STelnet user is 0. For example: Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc.), and specify. It supports various scanning techniques, including port scanning and OS detection, which can be useful for scanning Huawei switches. SNMPWalk: SNMPWalk is a command-line tool that utilizes Simple Network Management Protocol (SNMP) to retrieve information from network devices. It can be used to. Before You Start This document will help you log in to and quickly configure Huawei S series switches. This document is for switches running V200R003C00 and later. You can run the display version command in the user view to check. How to set a user level for Huawei switches?

Maybe that's easy for a practised hand, but it's a little hard for a beginner, if you don't know the command.
