

Installation price of hot aisle doors in computer room

Overview

Sliding Doors offer data centers aisle-end containment in just minutes and without the need for contract labor.

Key Takeaways

The cost of installing hot aisle containment doors varies widely, typically ranging from a few hundred to several thousand dollars per door depending on type, materials, and installation complexity. Factors Affecting Installation Cost

- Door Type and Material
 - Sliding or swing doors made of polycarbonate or flame-rated materials are common. Pre-assembled doors with airtight gaskets and ergonomic handles can cost more due to higher quality and ease of installation .
 - Curtain or vinyl panel solutions are a lower-cost alternative, suitable for retrofits, and can be installed quickly with minimal infrastructure changes .
- Installation Method
 - Some doors, like AisleLok® or Magswitch® sliding doors, allow for tool-free installation directly onto rack ends, reducing labor costs .
 - Ceiling-mounted or floor-mounted containment systems may require more labor and structural support, increasing overall cost .

- Customization and Size
- Standard aisle widths and heights are less expensive, while custom-sized doors for unique aisle dimensions or special viewing panels increase material and labor costs .
- Additional features like clear polycarbonate panels for visibility or multiwall panels for insulation can also affect pricing .
- Retrofit vs. New Construction
- Retrofitting an existing data center with rack-based or curtain-style containment is generally more cost-effective than installing a full ceiling or floor-mounted system in a new build .
- New construction allows for integrated containment, which may have higher upfront costs but better long-term efficiency.

Typical Price Ranges

- Budget-friendly curtain or vinyl doors: \$200-\$500 per aisle end, including basic installation .
- Standard pre-assembled sliding or swing doors: \$800-\$2,500 per door, depending on size and materials .
- High-end custom doors with advanced features: \$3,000-\$5,000+ per door, especially for large aisles or specialized containment systems .

Cost-Saving Tips

- Use rack-based containment for gradual implementation.
- Choose pre-assembled doors with simple mounting systems to reduce labor.
- Monitor airflow and temperature to ensure containment efficiency, avoiding unnecessary over-specification . By considering these factors, data center managers can select a hot aisle door solution that balances installation cost, efficiency, and long-term energy savings.
