Malaysia Steel Cable Tray Price Inquiry

Overview

Affordable cable tray prices in Malaysia. Durable and efficient solutions for cable management and protection.

Key Takeaways

Steel cable trays in Malaysia typically range from RM50 to RM300 per 8-foot section, depending on material, type, and finish. Price Overview

Steel cable trays in Malaysia are available in galvanized steel, stainless steel, and aluminum, with prices varying according to material quality, corrosion resistance, and design. For example, hot-dip galvanized (HDG) steel trays are commonly used for industrial and commercial installations due to their durability and corrosion resistance, and they generally cost between RM100 to RM300 per 8-foot section depending on width and configuration (ladder, perforated, or solid-bottom) . Smaller or simpler trays, such as 3"-6" metal trays, can be priced around RM50-RM100 per section .

Types and Materials

- Ladder-type trays: Ideal for heavy-duty power cables; allow better ventilation and easier cable installation .
- Perforated trays: Suitable for lighter cables and data/communication lines; provide good airflow and drainage .
- Solid-bottom trays: Used where cable protection from dust or liquids is required .

- **Materials:** Galvanized steel (most common), stainless steel (for high corrosion resistance), aluminum (lightweight and corrosion-resistant) .

Supplier Options

- **Array Metal:** Offers a wide range of cable trays with competitive pricing and international distribution; located in Shah Alam, Selangor .
- **SAN Engineering:** Provides HDG, stainless steel, and aluminum trays with corrosion-resistant finishes like zinc, PVC, and epoxy; suitable for industrial and commercial projects .
- **KHE Electrical (Shopee Malaysia):** Local supplier with ready stock of 3"-12" metal trays; prices vary by size and type, with direct ordering via WhatsApp or transport arrangements .
- **Alibaba Malaysia Suppliers:** Offers hot-dip galvanized, FRP, and perforated trays with customization options for industrial and data center applications .

Additional Considerations

- **Length:** Standard sections are typically 8 feet (2.44 meters). Longer sections may require special transport arrangements .
- **Finish:** Zinc, PVC, or epoxy coatings increase corrosion resistance and slightly affect pricing .
- **Bulk Orders:** Prices per section may decrease for large quantities; suppliers often provide quotations based on project requirements. For accurate pricing, it is recommended to contact suppliers directly with your required tray type, material, size, and quantity to obtain a quotation tailored to your project.
