

Multi-level stacking of Huawei core switches

Overview

This section uses two PEN central switches (CloudEngine S6730-H6FX4Y2CZ-V2) forming a stack via uplink ports as an example. Configure two PEN central switches (Core1 and Core2) to set up a stack.

Key Takeaways

Switch stacking is a cornerstone of modern network design, enabling simplified management, improved redundancy, and scalable bandwidth. Huawei's stacking technology (e., iStack and CSS) allows multiple physical switches to operate as a single logical device. However, improper configuration or. Unless otherwise specified in the contract, all statements, information, and recommendations in this document are provided "AS IS" without warranties, guarantees or representations of any kind, either express or implied. effort has been made in the preparation of this document to ensure accuracy of. Switch stacking is the process of combining multiple switches into a logical device that participates in data forwarding as a whole, in order to expand the number of ports, simplify networking, increase reliability, and extend the system's processing power and bandwidth. Moduletek Labs takes Huawei. Welcome to our comprehensive Huawei Stack Configuration tutorial! In this video, we'll walk you through the process of setting up a stack configuration using Huawei switches. Main Switch: Responsible for managing the entire stack system, there is only one in a.
