

RIVO MULTITRADE OPTICAL SYSTEMS

Opening an 8-shaped optical cable

Overview

Turn Figure 8 cable 360 degrees (upside down) before continuing. Pull in opposite direction (may require two people).

Key Takeaways

To open and lay a figure-8 optical cable safely, use the “figure-8” looping method to prevent twisting, maintain bend radius, and protect the fibers during installation.

Understanding Figure-8 Optical Cable

A figure-8 optical cable combines the optical fiber core with an integrated messenger wire in a distinctive “8” cross-section, making it self-supporting for aerial installations . This design allows the cable to span long distances without additional support hardware, commonly used in rural broadband, 5G backhaul, and utility co-deployment projects . The cable consists of two components: the messenger component (support strand) and the cable component (fiber core), both enclosed in a single jacket .

Preparing the Cable for Installation

- **Storage:** Keep the cable on its reel with protective material intact until installation. Store reels on flat, firm surfaces, away from sharp objects or flooding risk . Seal cable ends with heat-shrink caps to prevent moisture intrusion .
- **Inspection:** Before de-reeling, visually inspect the cable for damage. Avoid rolling or kicking the cable to prevent internal fiber stress .

- Cleanliness: Use a plastic sheet or tarp when laying the cable on the ground to keep it clean .

Laying the Cable Using the Figure-8 Method

- Figure-8 Loops: Lay the cable on the ground in large figure-8 loops (commonly 2–4 meters or 6–12 feet depending on cable stiffness) to prevent twisting. The half twist on one side of the 8 is undone on the other side, minimizing mechanical stress .
- Offset Loops: Slightly offset each loop from the previous one to reduce pressure points and kinking .
- Flipping the Cable: After laying the loops, pick up the cable and flip it over so the end to be pulled next is on top .
- Pulling: Attach the cable end to a pull rope using a swivel-pulling eye to prevent additional twisting during the pull . Pull slowly and steadily, ensuring the cable is not bent beyond its minimum bend radius .

Midspan Pulls for Long Runs

For very long runs (over ~4 km), a midspan pull may be necessary: place the reel at an intermediate point, pull one end to one side, figure-8 the remaining cable, then pull the second end to the other side . This method reduces the need to flip the cable on the ground and maintains fiber integrity.

Additional Handling Tips

- Avoid exceeding the cable's minimum bend radius to prevent attenuation or permanent fiber damage .
- Do not pinch, squeeze, or twist the cable during installation .
- Use plastic clamps with large surface areas for securing the cable, applying gentle pressure .
- Protect connectors and ends from contamination to maintain signal quality .

By following these procedures, you can safely open, handle, and install figure-8 optical cables while minimizing the risk of fiber damage and ensuring reliable network performance.

Opening an 8-shaped optical cable

Turn Figure 8 cable 360 degrees (upside down) before continuing. Pull in opposite direction (may require two people). Use a swivel

The FOA Reference For Fiber Optics-Installing Fiber Optic Cable ...

Pull the cable out of the conduit or innerduct and lay on the ground in a large "figure 8" pattern. The size of the "8" will be determined

Figure 8 Method for Fiber Optic Installation | PDF

This document provides instructions for using the "figure 8" technique when installing fiber optic cable over long distances. It

Optical Fiber Cable

ep the cable clean. Pull slowly and carefully lay the cable in the figure 8 pattern to prevent kinking. Each "8" should be slightly offset

Installation of Corning Optical Communications Self-Supporting

It incorporates both a steel messenger and the core of a standard optical fiber cable into a single jacket of figure-eight cross-section.

Figure 8 Fiber Optic Drop Cable

The instructions in this document explain how to prepare end openings of the Prysmian Figure 8 Fiber Optic Drop Cable for

Installation Guide for SST Figure-8 Drop Cable

All installers should be familiar with their company's safety practices and applicable codes and regulations. Observe all applicable

Figure 8 Fiber Optic Installation Guide

This document provides guidelines for installing figure 8 cable in an aerial facility. It discusses general safety precautions, references

Indoor Installation of Corning Optical Communications Fiber Optic

A typical fiber optic connector is 0.5 in (1.25 cm) in diameter, has a pull-off rating of 15 lb (6.8 kg) or less, and must be protected

Introduction Of Figure 8 Fiber Optic Cable

Optical cables with a cross-sectional shape of "8" are generally called figure 8 fiber optic cables. The optical fiber

GENERAL INFORMATION

A figure 8 fiber optic cable design incorporates a steel or dielectric messenger into the fiber optic cable thus, eliminating the need to

How Do You Insert an Optical Cable: A Step-by-Step Guide

Optical cables, also known as fiber optic cables, are becoming increasingly popular for their superior audio quality and

The FOA Reference For Fiber Optics-Installing Fiber Optic Cable

General Guidelines For Installing Fiber Optic Cable Fiber optic cable may be installed indoors or outdoors using several different

DRAFT Preparation Guide_OFC_Drop-Lite Optical Fiber Cables

Overview The purpose of this document is to provide guidelines for accessing the fibers of STL RapidDrop Optical Fiber Cables, to

Installation Guide for SST Figure-8 Drop Cable

1.2 SST Figure-8 Drop cables are outside plant cables incorporating both a steel messenger and a single buffer tube with up to 12

Optical fiber

An optical fiber, or optical fibre, is a flexible glass or plastic fiber that can transmit light from one end to the other. Such fibers are

Figure 8 Fiber Optic Installation Guide

Figure 8 Fiber Optic Installation Guide This document provides guidelines for installing figure 8 cable in an aerial facility. It discusses

Optical Fiber Cable

The size of the „8“ will be determined by the size and stiffness of the cable, but 2 to 4m is a common size. The end of the cable will
