

RIVO MULTITRADE OPTICAL SYSTEMS

Price of Secondary Distribution Box Assembly

Overview

Secondary Distribution Box: Reliable & Customizable Options Find trusted secondary distribution boxes with IP65 protection, customizable features, and verif.

Key Takeaways

A secondary distribution box assembly typically costs between \$1,100 and \$4,500, depending on amperage, panel type, labor, and location. Typical Cost Ranges

For standard residential installations in the U.S., a basic replacement of a 100A, 8-circuit panel with standard breakers usually costs \$1,100–\$1,600, including materials, labor, and permits. A mid-range upgrade with a 150A, 12-circuit panel, some conductor replacements, and standard labor can range from \$1,600–\$3,200. High-end or larger upgrades, such as a 200A service with 16–18 circuits, new feeders, or meter socket work, can reach \$3,000–\$4,500 depending on complexity and location .

Factors Affecting Cost

- Amperage and panel size: Higher amperage panels (150–200A) and more circuits increase material and labor costs .
- Panel type and features: Outdoor or weatherproof enclosures, corrosion-resistant hardware, surge protection, or smart monitoring features add to the price .

- Labor and installation complexity: Labor rates typically range from \$75-\$150 per hour, with total hours varying from 4-12+ depending on wiring complexity, access, and whether a full service upgrade is required .
- Permits and code compliance: Local permitting fees, inspections, and code upgrades can add 5-25% to the total cost, especially in urban or high-regulation areas .
- Location and accessibility: Rural areas may have lower labor costs but higher transport fees for special panels, while urban areas may incur delivery and permit surcharges .

Additional Considerations

- Wiring and conduit: Re-routing or replacing existing wiring can increase costs.
- Service upgrades: If the building requires higher capacity or code compliance improvements, expect additional charges.
- Optional features: Battery backup, surge protection, or smart breakers can further increase the total investment . In summary, the cost of a secondary distribution box assembly varies widely based on panel amperage, number of circuits, installation complexity, and regional labor rates, with typical U.S. residential projects ranging from \$1,100 for basic replacements to \$4,500 for high-end upgrades. Proper planning and consultation with a licensed electrician can help ensure accurate budgeting and compliance with local electrical codes .
