Waterproof and durable distribution box

Overview

Waterproof Distribution Box | IP65 Plastic DIN Rail Each enclosure delivers dependable IP65–IP68 sealing for outdoor and industrial use, with options for W.

Key Takeaways

Waterproof distribution boxes with IP65–IP66 ratings, made from durable ABS or PC plastics, provide reliable protection for electrical systems in harsh environments. Key Features

Protection and Durability: These distribution boxes are designed to withstand dust, rain, UV exposure, and mechanical stress. Most models meet IP65 or IP66 standards, ensuring complete protection against water jets and dust ingress, and comply with IEC60529 and related international standards for electrical safety and flammability .

Materials: High-quality ABS and polycarbonate (PC) plastics are commonly used, offering excellent mechanical strength, corrosion resistance, and UV stability for outdoor installations . Some models feature transparent PC doors for easy inspection without opening the enclosure .

Configurations and Sizes: Distribution boxes are available in single, double, or triple layers, with 4 to 39 ways (positions) to accommodate various circuit requirements. Compact AT Series boxes are ideal for tight spaces, while HT Series or larger models provide extra internal room for complex wiring and DIN rail mounting .

DIN Rail and Accessories: Many boxes come with DIN rails, neutral and earth busbars, and knock-out entries for cable glands, allowing flexible installation of MCBs, RCDs, or RCBOs. Accessories like labels, bars, and pre-assembled solutions are often available for convenience .

Applications: These boxes are suitable for industrial, commercial, photovoltaic, EV charging, lighting, pumps, HVAC, and automation systems, both indoors and outdoors .

Reliability: Compression gaskets maintain sealing even after repeated openings, ensuring long-term performance. The enclosures are lightweight yet robust, making them suitable for field installations .

Choosing the Right Box

- **IP Rating:** Select IP65 for general outdoor use; IP66 for areas with high water exposure.
- **Material:** ABS for standard durability; PC for higher mechanical strength and UV resistance.
- **Size and Layout:** Consider the number of ways, internal space, and DIN rail requirements.
- **Environmental Conditions:** Use UV-stabilized housings for sun-exposed installations and confirm compliance with relevant standards. Durable and waterproof distribution boxes provide safe, long-lasting electrical protection, ensuring reliable operation in challenging environments while supporting flexible wiring and modular configurations .
