

RIVO MULTITRADE OPTICAL SYSTEMS

Where to plug the power cord into the fiber optic router

Overview

What Does a Router Need to Be Plugged Into?

Complete Setup GuideWhat does a router need to be plugged into?

A router needs power and Ethernet from a modem.

Key Takeaways

To power a fiber optic router, plug the router's power cord into the designated port on the router and then into a standard electrical outlet.

Step-by-Step Instructions

1. Prepare Your Equipment Ensure you have the router, its power adapter, and any necessary cables (Ethernet and fiber optic) ready. The router should be placed on a stable surface near a power outlet .

2. Connect the Fiber Optic and Ethernet Cables First
 - Plug the fiber optic cable from your ISP into the Optical Network Terminal (ONT) if your setup includes one .
 - Connect an Ethernet cable from the ONT's Ethernet or GE1 port to the router's WAN or Internet port .
3. Connect the Power Cord
 - Locate the power input port on the back of your router.
 - Insert the router's power adapter plug firmly into this port.

- Plug the other end of the power adapter into a standard electrical outlet . 4. Power On the Router
- Switch on the router if it has a power button.
- Wait for the indicator lights to stabilize, which may take a few minutes. Solid lights usually indicate a successful power connection and network readiness . 5. Verify the Connection
- Check that the router's lights indicate power and internet connectivity.
- If necessary, access the router's admin panel via a web browser to complete setup and configure Wi-Fi settings . Tips for Safety and Performance
- Avoid using damaged power cords or outlets.
- Ensure cables are securely connected to prevent intermittent power or connectivity issues.
- Keep the router in a ventilated area to prevent overheating. By following these steps, your fiber optic router will be safely powered and ready for network configuration.
